The world is now facing many challenges, such as global warming, climate change, and economic inequality. These challenges require a global perspective and a collaborative approach. The book aims to provide a comprehensive introduction to International Economics, covering all major topics such as trade policy, international trade theory, foreign direct investment, and international finance. The book is designed for students of economics, business, and management, and will also be useful for professionals and researchers in the field.

The book is divided into several parts, each focusing on a specific aspect of International Economics. Part I covers the basic concepts of International Economics, including the nature of international trade, the role of government in international trade, and the impact of international trade on the economy. Part II covers international trade theory, including the theory of comparative advantage, the theory of absolute advantage, and the theory of factor endowments. Part III covers international trade policy, including the theory of protectionism, the theory of free trade, and the theory of mercantilism. Part IV covers international trade in services, including the theory of trade in services, the theory of foreign direct investment, and the theory of international trade in services.
